

GESTAVET® 600

MAXIMIZING YOUR
REPRODUCTIVITY

The evolution of animal health

GESTAVET® 600

Increasing your REPRODUCTIVITY

Combination of freeze-dried PMSG and hCG that mimics the activity of natural gonadotropins (FSH & LH)

5 mL administered by intramuscular injection

INDUCTION OF ONSET OF ESTRUS & OVULATION

Puberty induction in healthy gilts

Gilts > 100 kg

Gilts > 200 days old

HEAT INDUCTION & SYNCHRONIZATION

Between 3 to 6 days after treatment

REDUCTION OF NON-PRODUCTIVE DAYS

↑ PWSY* ↓ Gilts replacement ↑ Profit

* PWSY= Piglets Weaned Per Sow Per Year

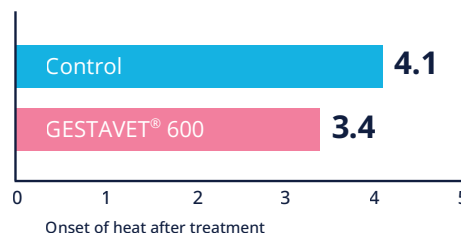

Where does GESTAVET® 600 act in the farm?

What are the benefits of using **GESTAVET® 600**?

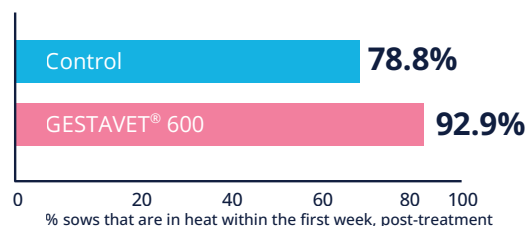

Helps reduce WEI (Weaning to Estrus Interval)

- **GESTAVET® 600** reduces WEI and non-productive days
- More farrowings and piglets per year
- Improves farm profitability

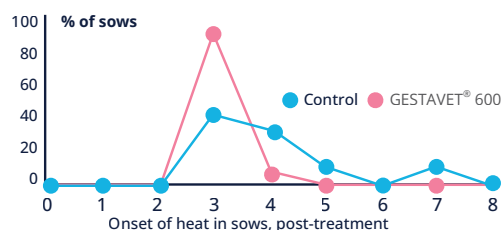

Treatment and prevention of anoestrus

- More sows in heat during the first week, post-treatment.
- Less anoestral animals during the post-weaning period.
- Prevention of seasonal anoestrus in gilts and sows.

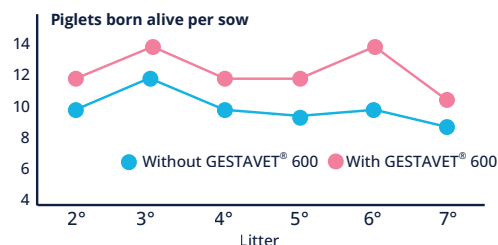

Synchronization and concentration of estrus

- **GESTAVET® 600** helps concentrate estrus within a defined period
- Facilitates animal handling, assists in batch mating, and scheduled farrowing
- Optimizes labor efficiency and workflow
- Improves group uniformity.

Increases fertility

- **GESTAVET® 600** stimulates follicular development through PMSG and triggers ovulation through hCG.
- Improves reproductive performance, specifically fertility and prolificacy.
- Increases the number of piglets born alive per sow, enhancing overall farm productivity.

"Determination of the therapeutical bioequivalence of GESTAVET and a reference product".

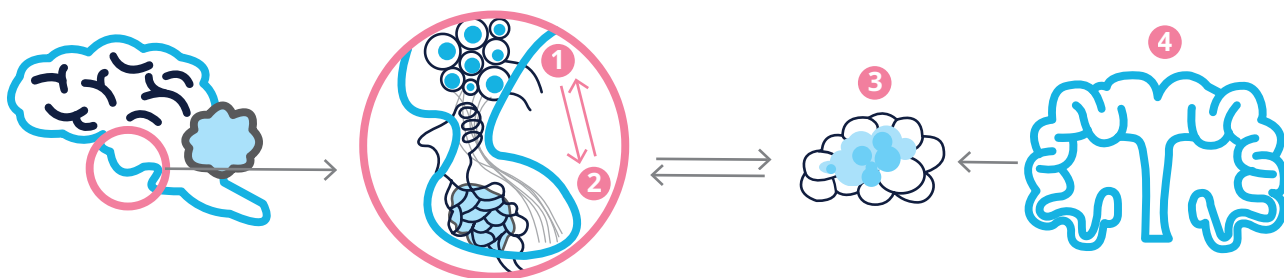

GESTAVET® 600

PMSG 400IU/HCG 200IU

Mimics the activity of natural gonadotropins (FSH & LH)

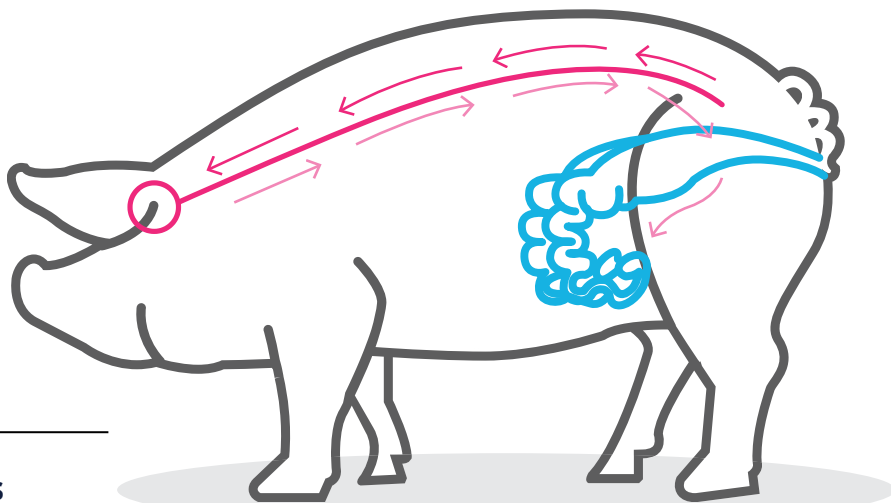

1 Hypothalamus
GnRH

2 Pituitary Gland
FSH { GESTAVET®600
LH { PMSG + HCG }

3 **Actions on the ovaries**
Stimulates follicular growth
Induces ovulation
Improves estrus quality

4 **Uterus**
Increases pregnancy rate
